

### 6.3. Water usage and care

#### 6.3.5. Water-conscious planting

*Plants in Faculty of Psychology*

#### **Description:**

Faculty of Psychology has many greenery plants inside and near the area of the faculty. The plants include banyan tree, kapok tree, and many grass-type plants. These kinds of plants don't need any maintenance and can be left alone to grow by itself. In the rainy season, we don't need to water it. While in the dry season, we only need to water it occasionally. Thus, we can save water while maintaining the greenery environment in our faculty.
