

# Implementation of SDGs at the Faculty of Psychology

## 12. Responsible Consumption and Production

### 12.2. Operational measures

#### 12.2.4. Policy waste disposal - landfill policy

#### Description:

In the Faculty of Psychology, we differentiate trash can for organic, inorganic, and plastic bottle waste. By doing this, we could treat the waste according to their type. For waste that can still be recycled, we will try to recycle it. While the potentially hazardous waste will be separated from other wastes.

We try to recycle waste as much as possible to reduce the waste we produce. We do that by reusing printed paper that still has blank space on the one side for printing routing slip, writing memos, and printing assignment and report drafts. We also measure our paper usage. On average, the number of paper usage per month at the Faculty of Psychology is 18 reams.
